[WE BUSTED ASS HARDER THAN EVER THIS YEAR TO MAKE RIDER-INSPIRED CONCEPTS LIKE THE 3D INTERFACE CONNECTION AND ENVIRONMENTAL CONTROL SYSTEM (ECS) HAPPEN. THE END RESULT IS THE MOST PROGRESSIVE LINE OF SNOWBOARDING EQUIPMENT ON THE PLANET.] [THE MORE YOU WORK AROUND HERE, THE MORE YOU HAVE TO RIDE. RIDING IS WHERE THE ENERGY COMES FROM AND IT'S ALSO WHERE IT GOES.] [NOW IF I CAN JUST LEARN HOW TO MAKE IT DOWN AN S-CHUTE WITHOUT SLAMMING (see figs. 1-13). DAMN.]

KELLY AIR KELLY SLOPESTYLE

BRUSHIE

TYPICAL USER
SPECIMENS

Terje Haakonsen, 1992 World Halfpipe Champion who still doesn't have a driver's license, but he does rip

Stevie Alters, jib-bonk specialist--he'll slide anything--rails, picnic tables, and shiny new cars

Matt Nelsen, kid who scrounged for recycled aluminum cans all summer to buy his new ride

Nicole Angelrath, 1992 Overall World Champion; freerides on her AIR 5.1

Aaron Walker (age 9, AIR 4.1), wants to grow up to look just like Shawn Palmer (tattoos and all)

Sally Walker (Aaron's mom), says she'll never ski again, loves to sink it deep in the pow pow

Tom Benson, investment banker dude, knows more about QUOTRON[®] machines than riding, he still has fun

TECHNOLOGY DEFINED:

All-mountain, freestyle/freeriding designs built to function for the widest range of riders--call it how you see it-- freeriding addict, back country purist, master log slider, or World Halfpipe Champion. No matter what type of riding you're into--you'll find an Air Series model to expand your riding horizons.

AIR 3.0

AIR SERIES

WHAT

WHY

	X	
Full length vertically laminated wood core	—	Lively feel and snappy flex
Freestyle nose, tail kick, sidecut, and flex	—	All-condition freestyle/free-riding performance
Rider Responsive Flex	—	On-demand responsiveness with full-time stability
Gloss finish	—	Looks cool and snow won't stick
1000 grade base	—	Fast running surface and easy to fix
Burton Design Team	—	It works for our designers
	X	

New 3D Insert Pattern with 'Nuke Proof' Inserts

STANCE WIDTH RANGE

AIR 3.0	≈ 12" (30.5cm) to 18" (45.5cm)
AIR 4.1	≈ 12" (30.5cm) to 18" (45.5cm)

SEE UNIT 4 INTERFACE SYSTEMS

AIR 4.1

AIR 5.1

AIR SERIES

WHAT

WHY

Full length vertically laminated wood core	Lively feel and snappy flex
Freestyle nose, tail kick, sidecut, and flex	All-condition freestyle/free-riding performance
Rider Responsive Flex	On-demand responsiveness with full-time stability
Gloss finish	Looks cool and snow won't stick
1000 grade base	Fast running surface and easy to fix
Burton Design Team	It works for our designers

New 3D Insert Pattern with 'Nuke Proof' Inserts

STANCE WIDTH RANGE

AIR 5.1	= 14" (35.5cm) to 20" (50.5cm)
AIR 6.1	= 16" (40.5cm) to 22" (55.5cm)

SEE UNIT 4 INTERFACE SYSTEMS

AIR 6.1

KELLY AIR

KELLY SLOPESTYLE

Full length vertically laminated wood core	Lively feel and snappy flex
Epoxy matrix construction	Light weight with added durability, performance, and precision
New nose shape, tail shape, and sidecut geometry	Ultimate all-mountain freestyle and powder performance
250mm waist width	Stability, minimal boot overhang, maximum powder flotation
Low profile nose	Smooth transitions and powder flotation
New taper angle tail	No hang-ups and sinks in powder
Rider Responsive Flex	On-demand responsiveness with full-time stability
Gloss finish	Looks cool and snow won't stick
2000 grade UHMW sintered base	Added durability (jib kids take note), speed, wax absorption
Designed by four time World Champion Craig Kelly	They're built to work--no doubt about it!

WHAT

WHY

KELLY

New 3D Insert Pattern
with 'Nuke Proof' Inserts

STANCE WIDTH RANGE

KELLY AIR = 16" (40.5cm) to 22" (55.5cm)

SLOPESTYLE = 16" (40.5cm) to 22" (55.5cm)

SEE UNIT 4 INTERFACE SYSTEMS

TYPICAL USER SPECIMENS

Craig Kelly, 4-time World Freestyle Champion who's logging more heli-time than humanly conceivable, does it all
Steve Matthews, likes to hike/descend large geographic formations anywhere on this planet (from Nepal to Montana)
Ken Achenbach, world-renowned powder slut and heli-boarding scammer (also a big boy)
Shannon Skeritt, Burton test animal and all-around freeriding terrorist
Keith Wallace, Idaho native, rides pipe, rides trees, rides pow, does it all--kick-ass rock climber

BRUSHIE

JF

TYPICAL USER SPECIMENS

Jeff Brushie, 1992 P.S.T.A. Overall Halfpipe Champion, aspiring rapper, and McDonald's® connoisseur

Brian Iguchi, new face who can spin to make you sick and bust largeness to make you even sicker

Russell Winfield, freending/pipe riding mogul, mack-daddy, all-'round groovin' kind of guy

Andi Abenthung, Burton Innsbruck warehouse (*lager*) master and avid freestyle rider (sportive freak)

Bruce Simpson, un-motivated high school student, dreams of being the next World Halfpipe Champion

New 3D Insert Pattern with 'Nuke Proof' Inserts

STANCE WIDTH RANGE

BRUSHIE = 16" (40.5cm) to 22" (55.5cm)

SEE UNIT 4 INTERFACE SYSTEMS

BRUSHIE

WHAT

WHY

Full length vertically laminated wood core	Lively feel and snappy flex
Epoxy matrix construction	Light weight with added durability, performance, and precision
Halfpipe specific nose/tail shape, and flex pattern	Uncompromising pipe performance
Square tail	Easy to find on tail grabs
New 'Flyweight' Construction in tip and tail	35% lighter weight, quicker spins and quicker turns
Rider Responsive Flex	On-demand responsiveness with full-time stability
Gloss finish	Looks cool and snow won't stick
2000 grade UHMW sintered base	Added durability (jib kids take note), speed, wax absorption
Dreamt of by Jeff, designed by Jeff, tested by Jeff, and fully approved by Jeff	He likes it

UNIT 2

X CLASS

ASYM AIR 5
ASYM AIR 6

TYPICAL USER SPECIMENS

Jason Ford, multi-talented rider, needs board suited for multi-talented riding style; wishes he could surf better.

Martin Freinademetz, Euro-style race creature, often has need for a 'do-all' board for powder/freending/freestyle.

Aaron Warkov, photographer, needs a board that will get him anywhere on the mountain (and back).

Sue Morrison, takes one riding/skiing trip per year, only has pack space for a single board, no compromises.

Scott Williamson, Vermont local (Vermolister), rides gates in morning, rides pipe in afternoon, rides one board.

TECHNOLOGY DEFINED:

Synthesis of two diverse mind sets. Freestyle technology is merged with alpine research and technology to produce ultimate versatility and all-terrain performance. If you want it all, but don't have the budget to sport the massive quiver, you've found the solution. Select proper size, mount and ride.

ASYM AIR 5

ASYM AIR 6

X CLASS

WHAT	WHY
Full length vertically laminated wood core	Lively feel and snappy flex
Epoxy matrix construction	Light weight with added durability, performance, and precision

THOR

TECHNOLOGY DEFINED:

M SERIES: Some riders want to link perfect seamless carves--this requires a board with full-on alpine characteristics. Many of these same riders also demand powder and all-around freeriding performance that is difficult to achieve with a pure alpine design. M's are built for these riders. We've scammed the best aspects of our PJ and ASYM AIR technologies to produce this genetically superior hybrid. M's are some of the most underestimated boards in the line.

PJ SERIES: World class competitive riding and hard-core alpine carving performance are the key elements that make up the PJ series. Built to the exact specs of our World A-Team racers, many of these boards go through up to twenty rounds of prototype development before they ever make it into our line. Extensively field-tested on the 1992 World Cup Tour, where PJ designs won 7 of 12 alpine events. These shapes are the fastest designs we can make.

UNIT

3

M SERIES PJ SERIES

M 5.0	M 6.0
PJ 4.9s	PJ 5.6
PJ 6.3	PJ 7.3

TYPICAL USER SPECIMENS (M)

Nicola Pietrangeli, 1992 Overall World Champion, masters softer, forgiving alpine carving slalom. 5.0.
Peter Bauer, 1992 World Slalom Champion, needs a board for carving in powder, slush, and crud.
Doug Powell, 1992, really found a board that makes him feel like a real powder user. 5.6.
Stephanie Pogue, no one pays attention, but to her, to be a slalom skier.

TYPICAL USER SPECIMENS (PJ)

Peter Bauer, 1992 World Slalom Champion, defines the art of stylish (not to mention fast) alpine riding.
Ashild Lofthus, 1992 World Slalom and Super-G Champion, fastest woman on snow, eats slow skiers for lunch.
Marc Bufo, doesn't race, enjoys posing large hand-on-snow carves under crowded lifts, alpine carve complex.
Gregory Race, a most bio-mechanically correct rider, fast, clean, and strong.
Joe Zangerl, ex-Austrian National Ski Coach, big, powerful guy who knows how to set an edge.

BOARD REVIEW

1. IDENTIFY THE FOLLOWING:

2. ESSAY QUESTIONS: (use no more than one type-written page)

- What is rider responsive flex?
- Describe the difference between overall length and running length.
- Symmetric camber looks dumb but works good. Explain.

RIDER RESPONSIVE FLEX: On a ski, there is one boot, one force. One big, dead weight flexing the ski from a fixed point. On a snowboard, you've got two feet working for you, two control points. But if the flex of the board isn't designed to take this fact into account, you might just as well be standing on a ski. With Rider Responsive Flex, the rider is able to control the flex of the board, either by bringing the knees together to bend the board into a tight arc, or by allowing the board to flex naturally into a stable carve. Rider Responsive Flex allows the rider to 'fully exploit the unique flex properties of a snowboard for absolute carving control. **OVERALL LENGTH VS. RUNNING LENGTH:** The overall length of a board is simply a measurement from tip to tail. The running length is the actual length of the edge in contact with the snow when turning. Running length = edge holding control. Overall board length - running length = nose length + tail length. Any questions? **SYMMETRIC CAMBER LOOKS DUMB, BUT IT WORKS GOOD:** PJ's feature symmetric camber with an overall asymmetric design. This makes them more geometrically complicated than a Pringle's potato chip. If you put a PJ on a flat surface its curvature may look pretty strange. That's okay. Really, ask your geometry teacher.

2. ESSAY ANSWERS:

TECHNOLOGY DEFINED:

Pick your binding, pick your boot, and you've created an **INTERFACE SYSTEM**. We've designed three unique binding options which are each targeted for different types of riding. Along with these bindings, we have designed four (4) soft boots for use with our soft (Freestyle or Flex) bindings, and one (1) hard boot designed for use with our 3D Plate binding. This may seem confusing, but read on--you'll determine which product is best for you.

UNIT 4

INTERFACE SYSTEMS

NEW 3D INTERFACE
CONNECTION
BOOTS
BINDINGS

3D DISSERTATION

3D INTERFACE CONNECTION

WHAT IT IS: The interface system is the critical link between board and body. The interface should function as an extension of the body, and should function as smoothly as your thumb on a Nintendo® button. You should be free to concentrate on the real job at hand--riding, carving, sliding, boning, or just avoiding reckless skiers.

PROBLEM: In the past, we used inserts on all of our boards--inserts offered one or two stance width options with limited angulation options, and allowed for full time adjustability without the problems associated with non-inserted boards: drilling, tapping, epoxying, finding the right screws, and taking your best guess as where to set your stance for the rest of your life (at least with that board). Our insert system got the job done, but was far from the perfect solution.

As time went on, we listened to what the riders were telling us and recognized that it was time for a change. The full-time adjustability of inserts ruled, but the pattern didn't work. Riding styles were beginning to demand a variety of stance widths and stance positions that were not remotely possible with any existing insert pattern. Freestyle stances were getting wider, alpine stances were getting narrower, and stance angles ranged from straight across to over fifty degrees. Riders were also adjusting stance positioning (nose to tail) and stance angle according to what snow condition they were riding in. Bottom line--the time for change had come, so we had to do something.

SOLUTION: NEW 3D INTERFACE CONNECTION

The 3D Interface Connection (designed into all 1993 boards and bindings) gives riders more personalized stance selection than ever before--it provides over 2,000,000 (2,073,600 to be exact) stance options--enough to keep even the most extreme 'tech-head' happy. The entire system is built around our time-proven and thrash-tested "Nuke Proof" inserts, so adjustment is as easy as turning a screw.

1ST DIMENSION

**16 DIFFERENT
STANCE WIDTHS**

2ND DIMENSION

**360° STANCE
IN 3° INCREMENTS**

3RD DIMENSION

**TOEWARD/HEELWARD
CENTERING
MICRO (.5cm) ADJUSTMENTS**

1st DIMENSION: STANCE WIDTH POSITIONS

Positioning the 3D discs on the front and rear insert pattern allows for 16 different stance width options (in one inch (2.5cm) increments) -- this provides maximum comfort and performance. All boards have a 'reference stance' position clearly marked, which serves as a starting point for stance selection--beyond that, feel free to go 'fat' and wide or narrow and 'Euro'. Note: On a typical stance, it is possible to shift the stance forward (for optimal alpine performance) or back (for optimal powder performance) without having to change the overall stance width.

2nd DIMENSION: STANCE ANGLE SELECTIVITY

The 3D disc provides 360° stance selectivity in 3° increments. Any stance angle can be selected by loosening the three retention screws, rotating the binding, and engaging the disc by tightening the screws. Think of it as a new disco step -- a) loosen, b) rotate, and c) engage. Stance angle markings are clearly shown on disc. For most riders, actually knowing their stance angle is a ~~new~~ ~~game-changer~~.

3rd DIMENSION: TOEWARD TO HEELWARD ADJUSTMENT

Toeward/heelward adjustment allows for optimal boot centering across the true horizontal axis of the board without altering desired stance widths. The 3D disc allows for macro (.5cm) adjustments in toeward/ heelward centering -- providing optimal boot centering and minimal boot overhang. This helps prevent unexpected drag when boots dig in. People with boat feet (size 10+) will be stoked!

FINAL RESULT

The 3D Interface Connection allows the rider to ~~mount from~~ ~~2,073,600~~ ~~stances~~ ~~where~~ ~~ever~~. In other words, you can now mount your bindings wherever you want. ~~Anywhere~~ ~~and~~ ~~when~~. ~~So~~ ~~when~~ ~~an~~ ~~old~~ ~~mate~~ ~~a~~ screwdriver -- our new Mini Tools work great for this. Ride a different stance option every time you ride. ~~Get~~ ~~the~~ ~~new~~ ~~3D~~ ~~Interface~~ ~~Connection~~ ~~disc~~.

**Send us the math solution to this problem, along with a postage paid, self-addressed envelope, and we'll mail you a bonus prize. If you're still puzzled, send \$500.00 for sticker and solution.

FREESTYLE BINDING

3D CANT PLATE
(see Unit 5)

WHAT IT HAS

WHY IT HAS IT

FLAT NATURAL RUBBER SOLE WITH NEW TREAD PATTERN (see figure 42-A)

Three 'tread zones' built into new sole	Better feel for board and better hiking traction
Flat sole design (no heel) with lower overall height	Better feel/control of board, closer to board
New treaded toe/heel bevels	More grip when climbing/hiking
Sharper angle on toe/heel bevels	Less overhang and less toe/heel drag
Burton 'Landing Pad' air cushioning system in sole	Shock absorption on big airs and heelside chatters
Deeper overall tread pattern	Eliminates excess snow build-up, improves traction

NEW ANATOMICAL SHAPE OF LOWER BOOT (see figure 42-B)

Designed around the natural shape of foot	Best possible design for minimal length, max comfort
New shape allows for extra width in toe box area	More toe room for added warmth and comfort
Completely redesigned overall profile	Way short overall length—reduced toe drag

WATER-REPELLANT UPPER

Oiled, full grain, natural leather construction	Comfort, durability, and temperature consistent flex
New asymmetrically positioned nylon tongue	Favors proper directional flex (forward and in)
Triple seamed tongue	Eliminates BoneOut pain due to centered tongues
Redesigned heel geometry, oversized heel-saver pad	Easier lacing and increased flexibility
Asymmetrically angled toe-belt reinforcement	Reduces pressure points, increases durability
Double-riveted speed hooks and D-rings	Added protection from pressure of binding strap
	Tighter lacing and bulletproof durability

BLADDER

Microcellular foam injected around 6mm neoprene sock	Total mobility, warmth, and comfort
No-lace overlap design	Eliminates pressure points
Molded-in ankle wedges (in Achilles area)	Increased heel hold down

\$209.95

2-TONGUE BOOT

WHAT IT HAS

WHY IT HAS IT

FLAT NATURAL RUBBER SOLE WITH NEW TREAD PATTERN (see figure 42-A)

Three 'tread zones' built into new two-color sole	Better feel for board and better hiking traction
Flat sole design (no heel) with lower overall height	Better feel/control of board, closer to board
New treaded toe/heel bevels	More grip when climbing/hiking
Sharper angle on toe/heel bevels	Less overhang and less toe/heel drag
Burton 'Landing Pad' air cushioning system in sole	Shock absorption on big airs and heelside chatters
Deeper overall tread pattern	Eliminates excess snow build-up, improves traction

NEW ANATOMICAL SHAPE OF LOWER BOOT (see figure 42-B)

Designed around the natural shape of foot	Best possible design for minimal length, max comfort
New shape allows for extra width in toe box area	More toe room for added warmth and comfort
Completely redesigned overall profile	Way short overall length—reduced toe drag

WATER-REPELLANT UPPER

Oiled, full grain, natural leather construction	Comfort, durability, and temperature consistent flex
Dual lacing system	Maximum lateral mobility
Fully-gusseted lightweight nylon tongues	Functional/comfortable snow-tight performance
Computer stitched PVC lacing eyelets	Customized lacing options for variable flex
Asymmetrically angled toe-belt reinforcement	Added protection from pressure of binding strap

BLADDER

Microcellular foam injected around neoprene sock	Total mobility, warmth, and comfort
Thicker neoprene sock (compared to Freestyle Boot)	Added flexibility and softer bladder
No-lace overlap design	Eliminates pressure points
Molded-in ankle wedges (in Achilles area)	Increased heel hold down

\$249.95

2-TONGUE BOOT

Just ask any hardcore freestyle rat—two is better than one (we're talking tongues of course). The new 2-Tongue Boot is the next generation to follow last year's revolutionary design. All of the developments from the 1993 Freestyle Boot (totally new anatomical lower and tread pattern) have been incorporated into the new 2-Tongue. Hardcore freestyle riders know—this product works. Allowing for maximum freedom of adjustability and lateral flex, the 2-Tongue can be dialed to suit the needs of the most progressive pipe rider, the 'daddy-log slider' who lives to hear the sound of bark under his edge, or even the 1992 P.S.T.A. Overall Halfpipe Champion, Jeff Brushie. Don't believe the hype—ride it and find out where it's at.

→ FREESTYLE BOOT

When it comes to freestyle boot designs, riders have high expectations—they want it all. They want a boot to eliminate pain and pressure when riding, they want a boot that's comfortable/functional to hike in, they want a boot that fits and feels like their skate shoes, and they want a boot with a way short overall length to keep their toes and heels from dragging. With these demands in mind, we set out to build the new 1993 Freestyle Boot. After twelve months of design work, testing, grinding, shaping/re-shaping, and thousands of hours on-snow abuse, we ended up with the best boot we've ever built.

BI FREESTYLE

Our Freestyle bindings have been setting worldwide performance standards for several years. Most top pros, regardless of sponsorship commitments, use our bindings. Two years ago, when we began the development process for the new Freestyle Binding, we started with a clean slate—everything about this binding was designed from the ground up. The finished product represents years of combined effort from riders, product engineers, and production experts. For us, it was the first time that all components of the system (board, binding, and boot) were designed and engineered to function as a single unit. The new Freestyle Binding sets worldwide standards for comfort, performance, and adjustability. We don't want to preach about it—the word is on the hill, and on the result sheet—1st Place World Cup Men's Halfpipe, 1st place P.S.T.A. Overall Halfpipe in both Men's and Women's. Just ask anyone who's ridden it. It rules.

WHAT IT HAS

WHY IT HAS IT

NEW 3D INTERFACE CONNECTION

16 different stance width options	Maximum comfort, performance, and flexibility
360° stance angle selectivity (3° increments)	Allows for total freedom in stance angle selection
Toeward/heelward binding centering adjustability	Provides optimal boot centering and minimal overhang
Re-adjust any time with a screwdriver	Adjust anytime, anywhere—quickly

NEW BASEPLATE DESIGN

Anatomically correct (left and right) foot beds	Reduces overhang, increases comfort/performance
Anatomically correct (left and right) sidewalls/heel cups	Better fit/heel hold down and increased comfort
Lower sidewalls (featuring 10° interior bevel)	Maximum lateral mobility (enhanced boning)
Low profile heel cup	Enhanced lateral mobility and reduced drag
New double-wall "I-Beam" sidewall construction	Provides necessary strength while reducing weight
Multiple toe strap anchoring positions	Strap can be positioned away from pressure points
Multiple ankle strap anchoring positions	Adjustment for lateral flex and BoneOut comfort

NEW ROTATING HI-BACK

Micro adjustable rotation—18° range in 1.2° increments	Better heelside response and lateral mobility
Flat profile Hi-back	Allows for friction-free boning (no more hang-ups)
Adjustable forward lean (4 stops)	All freestylers are not alike
Anatomically designed heel pocket, molded into Hi-back	Added heel hold down—no need for boot heel tabs

NEW REDESIGNED STRAPS

BoneOut ankle strap features new durable construction	Provides optimal comfort with increased durability
New minimalist toe strap design	Reduces weight/improves performance and comfort
Recessed/minimalist strap hardware	Minimizes pressure points on feet
Smaller ankle and toe buckles	Less bulk, less drag, less weight

NEW REDUCED OVERALL WEIGHT

Less weight means you go higher

FLEX INTERFACE

FLEX BINDING

WHAT IT HAS

WHY IT HAS IT

SHELL	
P.U. dressed leather upper	Comfort and temperature consistent flex
Flat, flexible natural rubber sole	Better feel for board
Circular-studded tread pattern	Increased grip for wandering on hardpack
Beveled toe and heel	Reduces toe/heel overhang
Foam padded tongue	Comfort and added heel hold
Double-riveted speed hooks and circular eyelets	Easy to lace when you're in a hurry
BLADDER	
New redesigned bladder with revised size scale	Increased volume for better overall fit
Revamped internal padding design	Improved comfort, function and fit
Built-in ankle wedges	Reduces heel lift
Textured outsole on bladder	Minimizes slip in shell
Centered D-ring on tongue	Keeps tongue locked in place
Padded tongue	Support and comfort

\$159.95

Z-BOOT

The Z-Boot packs in the snowboard-specific functional features that have put Burton boots on the map. We've spent the past season re-working the shape, design, and materials of the bladder to enhance performance and comfort. In the world of soft boots, there simply isn't a better value. The Z-Boot will rage hard with either the Freestyle or Flex binding systems.

WHAT IT HAS

WHY IT HAS IT

FLAT NATURAL RUBBER SOLE WITH NEW TREAD PATTERN (see figure 46-A)

Three 'tread zones' built into new sole	Better feel for board and better hiking traction
Flat sole design (no heel) with lower overall height	Better feel/control of board, closer to board
New treaded toe/heel bevels	More grip when climbing/hiking
Sharper angle on toe/heel bevels	Less overhang and less toe/heel drag
Burton 'Landing Pad' air cushioning system in sole	Shock absorption on big airs and heelside chatters
Deeper overall tread pattern	Eliminates excess snow build-up, improves traction

NEW ANATOMICAL SHAPE OF LOWER BOOT (see figure 46-B)

Designed around the natural shape of foot	Best possible design for minimal length, max comfort
New shape allows for extra width in toe box area	More toe room for added warmth and comfort
Completely redesigned overall profile	Way short overall length—reduced toe drag

WATER-REPELLANT UPPER

Oiled, full grain, natural leather construction	Comfort, durability, and temperature consistent flex
Padded leather tongue	Comfortable and easy to lace
Leather gussets in tongue	Keeps your feet dry and warm
Webbed instep strap on lower lacing system	Improves heel hold down, eliminates pressure points
Extra beefy, stitched-in Hytrel® eyelets on webbed strap	Crank-proof durability
Grooved rubber gripper at end of webbed strap	Easy to grab and pull with gloves on
Asymmetrical, angled toe-belt reinforcement	Added protection from pressure of binding strap
Double-riveted speed hooks and D-rings	Tighter lacing and bulletproof durability

BLADDER

Italian, hand lasted, lace-up bladder	Major comfort, durability and Euro quality
Anatomically contoured foam inserts in heel cup area	Minimizes heel lift and increases comfort
Wool lining in lower bladder	Keeps feet warm and toasty
Corduroy lining in upper bladder	Ease of entry
Elastic band on lower lacing system	Easier tightening of bladder, enhanced heel hold
Diamond pattern rubber sole	Limits bladder slippage in shell
Lace-lock and centering D-ring on tongue	Easy non-slip tightening, keeps tongue in place
High profile bladder	Support and hi-back comfort

\$219.95

FLEX BINDING

On any given day, snow conditions, riding terrain, and riding attitude are subject to a wide range of extremes. No two riding situations are ever identical. Many riders demand a binding system that will get them through whatever they manage to get into. Early morning groomed carving sessions require binding performance that is radically different from the performance needed to rip tight turns through tree infested powder. The Flex Binding is (and has always been) the most versatile binding offered in our line. The Flex has all of the beefed up features found on the new Freestyle Binding, but also features the added support of a shin strap, simplified forward lean adjustment, and built-in Lateral Flex Channel—all of this equates to total adaptability to any possible riding condition. If you're into the feel of a soft boot riding style, but want more alpine versatility than the Freestyle Binding has to offer, the Flex will stoke you.

WHAT IT HAS

WHY IT HAS IT

NEW 3D INTERFACE CONNECTION

16 different stance width options	Maximum comfort, performance, and flexibility
360° stance angle selectivity (3° increments)	Allows for total freedom in stance angle selection
Toeward/heelward binding centering adjustability	Provides optimal boot centering and minimal overhang
Re-adjust any time with a screwdriver	Adjust anytime, anywhere—quickly

NEW BASEPLATE DESIGN

Anatomically correct (left and right) foot beds	Reduces overhang, increases comfort/performance
Anatomically correct (left and right) sidewalls/heel cups	Better fit/heel hold down and increased comfort
Lower sidewalls (featuring 10° interior bevel)	Maximum lateral mobility (easier to angulate knees)
New double-wall 'I-Beam' sidewall construction	Provides necessary strength while reducing weight
Multiple toe strap anchoring positions	Strap can be positioned away from pressure points
Multiple ankle strap anchoring positions	Adjustment for lateral flex and BoneOut comfort

HI-BACK

Exclusive Lateral Flex Channel	Increased lateral flex and 'soft boot' feel
Adjustable shin strap (removable if desired)	Increased ankle support, better toeside turn initiation

NEW FORWARD LEAN ADJUSTER

Compact design is recessed into Hi-back	Eliminating heelside drag
Improved design of adjustment mechanism (10° to 22°)	Lighter, more durable and easier to adjust

NEW REDESIGNED STRAPS

BoneOut ankle strap features new durable construction	Provides optimal comfort with increased durability
New minimalist toe strap design	Reduces weight/improves performance and comfort
Recessed/minimalist strap hardware	Minimizes pressure points on feet
Smaller ankle, shin and toe buckles	Less bulk, less drag, less weight

NEW REDUCED OVERALL WEIGHT

Less weight means more output with less work

\$149.95

SIZING: (SMALL-MEDIUM, 4-9) (MEDIUM-LARGE, 8-13)

COMP BOOT

Everyone digs the comfort, feel, and all-around flexibility of a soft boot, but many riders find that they need support that is closer to that of a hard boot. Freestyle boots are not supportive enough while a Megaflex hard boot is total overkill. The Comp is the ticket for this rider. The Comp Boot can bash through a slalom course at blistering speed, but it's equally at home riding deep powder or bustin' a few runs in the pipe. From a realistic viewpoint, it's the boot that a large majority of riders should be on. Try one on and you'll see what we mean.

MEGAFLEX BOOT

3D PLATE

WHAT IT HAS

WHY IT HAS IT

SHELL	
Micro adjustable three buckle closure system	Optimal fit/tightness adjustment
New widened range of buckle tightness	Buckles are easier to crank down
Full aluminum buckles	Improved strength-to-weight ratio and durability
Adjustable tongue length	Adjusts desired forward flexibility of boot
Boot-top power strap	Rider adjustable boot top flex
Highly beveled toe and heel	Eliminates boot interference when carving
Notch-grid in heel area of shell	Keeps bladder in place and improves heel hold
Tool free lateral flex/forward flex/forward lean adjustments	Allows for total customization of boot performance
Grooved outer sole fits snugly onto 3D Plate	Gets rider closer to the board
BLADDER	
Redesigned bladder with new lace closure system	More comfort with better heel hold down
Power strap on bladder	Additional heel hold down
Sculpted padding in tongue area	Added instep (BoneOut) comfort
Rubber shock absorbing material above toes	Heelside carving comfort
New molded diamond pattern rubber sole	Keeps bladder from sliding in shell

\$359.9

Please note: Megaflex Boots are NOT ski boots, are NOT designed for skiers, and are NOT designed by skiers. They ARE the ultimate piece of hyper performance footwear designed specifically for snowboarding. If you're looking to slice precise arcs in the snow and leave carve ruts that make skiers drool, the Megaflex Boot is the tool you need.

Hard boots are not for everyone, but riders who use them swear by them. Many people think hard boots are just for racers--this couldn't be further from the truth. Any alpine rider looking for mega support, total comfort and ultra responsive feel will enjoy the benefits of the Megaflex. The Megaflex is designed, tested, and ridden by the best racers in the world. In the end, this enables us to provide the consumer with the ultimate final product.

MEGAFLEX B

WHAT IT HAS

WHY IT HAS IT

NEW 3D INTERFACE CONNECTION	
16 different stance width options	Maximum comfort, performance, and flexibility
360° stance angle selectivity (3° increments)	Allows for total freedom in stance angle selection
Inward/heelward binding centering adjustability	Provides optimal boot centering and minimal overhang
Re-adjust any time with a screwdriver	Adjust anytime, anywhere--quickly
NEW DISTORTION-FREE BASEPLATE DESIGN	
Binding attachment points located in center of board only	Leaves toeside and heelside areas free of insert holes and hardware minimizing the effect of the binding on the torsional flex of the board
Overall plate design has been lowered by 6mm	Puts rider closer to the board for better feel
TOTAL ADJUSTABILITY	
Free movement (front to back) of both cages and bails	Micro adjustability in centering boot on board
Tool-free, on the slope size adjustment	Adjust when you want and where you want
Toe closure on front and back binding	Ease of entry and minimal overhang
CONSTRUCTION	
All metal frame construction on binding cage	Durability, consistent all-temperature performance
Both front and rear binding feature built-in 2° canting	Increased comfort, more natural riding position
Integrated heel lift and canting option	Keeps body biomechanically centered at any stance
Reduced overall weight	Less weight=more speed

\$149.95

SIZING: (SMALL-MEDIUM, 4-9) (MEDIUM-LARGE, 8-13)

OOT

Alpine-style riders demand a lot from their bindings—uncompromising performance, rock solid feel, perpetual customization/adjustment options, and easy-in/easy-out convenience. Precision high performance riding requires equipment that can be taken to the limit without having to worry about breakdown or failure. The new 3D Plate meets and exceeds the demands placed on it by the world's most demanding critics—our professional team. All of our top alpine racers rely on the new 3D Plate: Peter Bauer (1992 World Slalom Champion), Jason Ford (one very fast and very stylish alpine rider), and Martin Freinademetz (man with no fear of intense bodily harm).

In the real world (the world that most non-World Cup racers exist within), the typical rider will benefit from the extensive research and testing that this binding has undergone. With a multitude of new features, the 3D plate is the most technical, most adaptable, and most convenient we've ever offered.

3D PLATE

A MINI TOOLS

All of the on-hill adjustment you'll ever need. Our new T-Handle ratchet mini driver with interchangeable Phillips and slotted bit is lightweight and compact, and it works with all of our binding screws. The new T-handle allows you to really crank down on 3D binding screws, and the recessed bit storage clip eliminates "needless stab-bings" when you leave the driver in your pocket. We've also included a 10mm open end wrench so that you can also adjust your binding straps on the hill. This cool tool will make friends. \$17.95

B SPIROSTOMUM

One of a group of single celled aquatic animals known as protozoans. Available by each or ten pack.

C WIDE SCRAPER

Full length scraper does entire width of board in one stroke. Great for removing wax, tree bark, handrail paint, or anything else that happens to get on your base. \$6.95

D TUNE UP KIT

Snowboarders are the worst when it comes to tuning their gear. Make a statement, dare to be different, tune your board. The Tune Up Kit has everything you'll ever need to make your board look and ride like new. It's all packaged in a beefy 600 denier polyester velcro-closure case: P-tex candles, fibertex pad, edge file, sharpening stone, file card, full length scraper, spare screw compartment, and tuning manual to help you master the basics. \$34.95

E PELOMYXA CAROLINENSIS

Cysts, 1-8 typical nuclei, splinter-shaped chromatoidal bodies.

F KELLY TONGUE

Combine Craig Kelly with three years of development, thousands of hours of riding, countless generations of prototypes and the end result is our new Kelly Tongue. Anatomically shaped (left and right), the Kelly Tongue provides added heel hold down, enhanced toe-side response, and even distribution of strap pressure. The Tongue is fully padded, fully adjustable, and features a 'J' shaped contoured ankle strap. \$24.95

G TRICHINELLA IGUCHI

Cerebral parasite. Can cause excitability, the tendency to leave bindings unbuckled before huge airs, and subsequent heart palpitations.

TECHNICAL

**A****B****E****F****I****J**

ACCESSORIES

C

D

G

H

K

L

produce a variety of cant/heel/toe lift options. This puts the rider in a natural powerful stance for maximum comfort and performance. This product does not interfere with board flex due to centered attachment point. New material is ultra lightweight—allowing for use of cant without adding significant weight to the board. Environmentally sound—built in Vermont from recycled Ben and Jerry's® Ice Cream containers. Available in MIN (3.5 degrees) and MAX (7 degrees) sizes. \$29.95

[E] HUMAN PINWORM EGGS

(Enterobiums vermicularis)
Eggs of the Pinworm parasite. For External use only.

[K] AIR LEASH

It looks like a new cellular phone, but it's really just a cool leash. The Air Leash allows rider to leave leash strapped on to the leg while hiking the pipe. It has a beefy velcro closure and quick release hook. Next time you drop your board and have to go chasing after it, you'll wish you had one of these. \$24.95

[L] PLANARIA

Tiny red flatworms, creeping by cilia through the bloodstream of most mammals. Available overnight.

[H] BONEOUT ANKLE STRAP KITS

Old straps hurt. Upgrade your straps with our newest strap—designed to minimize pressure points on top of the foot and provide all-day riding comfort. The oblong Bone-Out hole provides added comfort and flex. The new padding construction offers increased durability. A must for all bindings. Anatomically sized, available in SM and ML. \$34.95

[I] 3D CANT/LIFT

For some riders, a personal combination of cant/lift is necessary to provide maximum comfort and performance. Our new 3D Cant/Lift can be used on front or rear bindings and is designed for use on Burton 3D soft binding systems. Binding rotates on cant to

UNIT **5**

ENVIRONMENTAL CONTROL SYSTEM

E.C.S. is a hassle-free system for getting dressed to ride. Regardless of the conditions outside, you can be sure that you've got what it takes to stay out riding all day—even when the weather sucks. E.C.S. utilizes advanced materials and snowboard-specific design combined in three different layers which work to keep you warm, dry, comfortable, and ready to rip whatever comes your way.

When dealing with the design and material selection for E.C.S., we follow the same proven process that we use in our snowboard development. For example, when we select a wicking mesh lining, we are not just looking for another lining with holes in it. We field test every wicking lining that we can get our hands on before making our final selection. Sure, this is an exhaustive and time consuming process, but we know that the added performance is worth it. Bottom line—you can find plenty of poser snowboard fashions, but you simply will not find better snowboard-specific performance.

The **ENVIRONMENTAL CONTROL SYSTEM** utilizes three distinct components:

1 – FIRST LAYER

Constructed from 100% Polyester POLARTEC® Series 100, this lightweight, quick drying underlayer wicks sweat away from the skin. No more clamminess. (Wear it against your skin--extremely functional, funky looking undergarment that will get you noticed in the lodge.)

2 – THERMAL LAYER

Providing lightweight, quick drying, insulation, our 100% Polyester POLARTEC® Series 200 fabric efficiently wicks moisture and adapts to fluctuating body temperatures.

3 – OUTER LAYER

The final protective covering for the total system, the Outer Layer locks out snow, wind, and water. The Outland, Universe, and Biolight outerwear designs feature water-proof/breathable fabrics and taped seams completing the E.C.S. solution for warm, dry, and comfortable riding.

The three pieces in our Outland grouping are designed to meet the needs of the most technically demanding riders who ride in the most intense (some would prefer to say "stupid") weather conditions. They're beefed up with all the technical/functional features that this type of riding demands, and they're built to handle the worst of what Mother Nature can slap in your face.

OUTLAND JACKET

WHAT

WHY

Burly waterproof/breathable ENTRANT™ outershell	Stays dry without being clammy
Wetsuit construction featuring taped seams	Locks out rain, snow, and moisture
Brushed Field Sensor superloft wicking mesh lining	Hi performance fabric to keep you dry and warm
Interior powder skirt with grabbing elastic	Keep snow from getting inside
Extra long body length with curved drop tail	Keeps hips and butt warm
Interior elastic drawcords at waist and hem	Ventilation, snow seal, compartmentalizes heat
Adjustable wrist cuffs with gusset and velcro	Ventilation, snow seal, and customized fit
Full protection hidden hood and visor w/interior drawcord	Full protection for frigid hikes and cold chairlift rides
Full front zipper with velcro stormflap	Keeps wind/snow out and protects zipper
Two mesh lined chest pockets with stormflaps	Chest ventilation and easy-access storage
Two front bellows pockets with stormflaps	Large pockets that are great for goggles, etc.
Interior velcro-closure Wackman pocket	Great place to stash your sound
Wind blocking collar	Added protection from nastiness

WHAT

WHY

Burly waterproof/breathable ENTRANT® outershell	Stays dry without being clammy
Wetsuit construction featuring taped seams	Locks out rain, snow, and moisture
80 gram THERMO-LITE® insulation (toasty!)	Lightweight cold weather protection without bulk
Two-way side zipper from armpit to hem with stormflap	Ventilation with easy-on/easy-off convenience
Extra long body length with curved drop tail	Keeps hips and butt warm
Interior elastic drawcords at waist and hem	Ventilation, total snow seal, compartmentalizes heat
Adjustable wrist cuffs with gusset and velcro	Ventilation, snow seal, and customized fit
Full protection hidden hood and visor w/interior drawcord	Full protection for frigid hikes and cold chairlift rides
Front chest zipper with velcro stormflap	Keeps wind/snow out and protects zipper
Two chest pockets with stormflaps	Easy-access storage
Two front fleece-lined pockets with stormflaps	Large pockets, great for storage
Interior velcro-closure Walkman pocket	Great place to stash your sound
Wind blocking collar	Added protection from nastiness

Sizes: xs-xl

OUTLAND SHELL

OUTLAND PANTS

WHAT

- Burly waterproof/breathable ENTRANT® outershell
- Wetsuit construction featuring taped seams
- Field Sensor wicking mesh upper
- Full length two-way side zippers with stormflaps
- Removable, adjustable suspenders with drop seat
- Articulated butt and leg
- Gusseted crotch
- Hi-back waist with double-sided, stretch spandex panel
- Bulletproof 500 denier Cordura® butt and knee patches
- Adjustable, exterior velcro-closure ankle cuff
- Interior extra-long ankle gaiter with velcro-closure
- Two side zippered pockets with stormflaps
- Front crotch zipper
- Oversized baggy cuts

WHY

- Stays dry without being clammy
- Locks out rain, snow, and moisture
- Hi performance fabric to keep you dry and warm
- Ventilation control with easy-on/easy-off simplicity
- Great for quick dumps (Chicks dig 'em too)
- Enhanced fit with greater freedom of motion
- Non-restrictive range of motion
- Added snow seal with better overall fit
- Abrasion protection / insulation from snowy lifts
- Better fit around boot
- Keeps snow out of boots
- Storage with zippers that won't freeze
- Quick-relief valve (sorry ladies!)
- Optimal fit with ultradope look

\$199.95

Sizes: xs-xl

The name says it all. Universe designs are built for all-around/all-condition performance—they're adaptable to a wide range of riding conditions—from summer slush at Stubai Glacier to the coldest head-numbing day at your local ski area. These pieces pack in many of the same technical/functional features that are used in our Outland group, but are generally slightly lighter weight and targeted for less extreme applications in terms of climate harshness and temperature. They've traditionally been the most popular items in our line, and they're the "pick o' the litter" of many of our professional riders.

UNIVERSE JACKET

WHAT

- Waterproof/breathable Delfy outershell
- Wetsuit construction featuring taped seams
- Field Sensor wicking mesh lining in upper body
- Extra long body length with curved drop tail
- Interior elastic drawcords at waist and hem
- Adjustable wrist cuffs with gusset and velcro
- Hidden hood with interior drawcord
- Full front zipper with velcro stormflap
- Two mesh-lined chest pockets with stormflaps
- Two front fleece-lined zippered pockets
- Interior velcro-closure Walkman pocket
- Wind blocking collar

WHY

- Stays dry without being clammy
- Locks out rain, snow, and moisture
- Designed to keep you dry
- Keeps hips and butt warm
- Ventilation, total snow seal, compartmentalizes heat
- Ventilation, snow seal, and customized fit
- Full protection for frigid hikes and cold chairlift rides
- Keeps wind/snow out and protects zipper
- Ventilation and easy access storage
- Large pockets, great for storage
- Great place to stash your sound
- Added protection from the burliness

\$199.95

UNIVERSE PANTS

WHAT THEY DO

- Waterproof/breathable Delfy outershell
- Wetsuit construction featuring taped seams
- Field Sensor wicking mesh lining down to knees
- Full length two-way side zippers with stormflaps
- Gusseted crotch and dropped front waist
- Hi-cut back with double-sided, stretch spandex panel
- Adjustable waist sizing with velcro side tabs
- Extra layer of waterproof/breathable fabric on butt and knees
- Interior removable foam knee pads
- Adjustable, exterior velcro ankle cuff closure
- Interior extra long ankle gaiter with velcro-closure
- Two side zippered pockets with stormflaps
- Front crotch zipper

WHY THEY DO IT

- Stays dry without being clammy
- Locks out rain, snow, and moisture
- Designed to keep you dry
- Ventilation control with easy-on/easy-off simplicity
- Much greater range of motion
- Added snow seal and better overall fit
- They'll still fit you after a big lunch
- Added durability and abrasion resistance
- Necessary protection when it's bulletproof
- Better fit around boot
- Keeps snow out of boots
- Storage with zippers that won't freeze
- Quick-relief valve (sorry ladies!)

THERMAL LAYER

2

E

C

S

FLEECE (synthetic pelt)

It's no secret, everyone who snowboards should be sporting fleece. We've been testing it for years and the cat (or should we say pelt) is out of the bag. Fleece is extremely lightweight, comfortably baggy, and works as the perfect insulating middle layer. The days of stinky long johns with a pair of moisture absorbing jeans and an AC/DC long sleeve T are history. A snowboarder without fleece is like a house without insulation, too hot in the summer and too cold in the winter. This THERMAL LAYER adapts quickly to fluctuating body temperatures so you can ride longer.

FIRST LAYER

Let's face it—when you ride, you sweat. When this sweat stays on your skin, you freeze your butt off. Our new First Layer is made of POLARTEC™ 100 fabric and is designed to wick the sweat off your body and keep you warm, dry, and comfortable.

We tested all of the latest and most technical materials. When we narrowed it down to the two best fabrics, we built special test garments with half the piece in each material so we could fully evaluate which fabric performed best. You may think that this stuff is only for granola-crunching climbers at 13,000 feet—not so; our testers and team riders wouldn't give us back the samples when they returned from their testing mission on the Austrian Glaciers.

We have specifically cut all of the pieces with slightly more room to allow for maximum comfort. The shorts are designed for warm spring days under your outerwear pants, and are also very hip for hangin' out in. This is the first snowboard specific First Layer on the market. Welcome to the 90's, ditch your old cotton underwear and get with the program.

TG

SWEATS

Snowboarding is more than a sport, it's an attitude. Burton Sweats are designed with input from our team riders who live that lifestyle.

T-SHIRTS

These Ts are big, thick, 100% cotton, with new colors that you won't find at J.C. Penneys or your local thrift store.

HATS

When you ride, you gotta wear a lid! In cold weather you could lose an ear or two if you're not careful, not to mention all the body heat you lose through your skull. Fleece hats and headbands make for easy washability and quick drying. The Knit hats have acrylic liners so you don't have to worry about the nappy head itches you can get with wool. For warm sunny days or just hiking the streets, the all new snocaps will get plenty of use.

GLOVES

Snowboarders don't just wrap their delicate hands around the cushy pistol grip of a ski pole. They let their hands do the dirty work direct. Check it. Whether you are dragging your hand on high-speed curves, grabbing an air, or bashing a gate, you need protection. But at the same time you want something you can leave on while adjusting your bindings. Our gloves and mitts are designed to provide the ultimate performance without sacrificing dexterity.

BAGS

Snowboarders travel in search of the epic session. Getting there with your equipment intact is half the struggle. Burton designs and builds bags that can take the abuse of pissed-off baggage handlers and frustrated taxi drivers. Featuring coated 600 denier polyester, burly zippers, and expedition-weight webbed strapping, these bags ensure that your equipment arrives at your destination looking much better than you. Global Team tested, approved and abused.

Snowboarders are returning to the sport's roots and exploring the back country in search of 'low budget' powder. For you neophytes, 'high budget' is heli-access or snowcat access. Burton has developed technical board and gear carrying systems which will help make your trek up Tuckerman's Ravine or an extended stay in the Montana back country a whole lot more plush.

A SNOWBOARDER CASE

The Snowboarder Case is designed for long trips. 600 denier polyester, padded walls and expedition weight webbing throughout, and a MX PVC reinforced tip, tail, and base panel make this bag the ultimate for airline travel. The bag has two-way, full access, beefy zippers and also has two large interior zippered pockets for boots and gear. The anatomic padded shoulder strap helps relieve the pain of those cross terminal (no cart available) hikes. Fits more boards than you own.

\$99.95

B SAFE SAC

The Safe Sac is ideal for protecting your board when traveling to local spots. The fastex closure system adjusts so that the bag can hold any board up to 178cm long. Made of coated 600 denier polyester, the bag protects the board from corrosive road grime while on a roof rack. Ride dangerously but travel safe. \$49.95

C ACANTHOCEPHALA

Encapsulated larve. Very thick sections, many larve available.

D TEAM BAG

Coated 600 denier polyester
MX PVC reinforced bottom
31" long X 13" wide X 14" high
(78cms X 33cms X 35cms)
Two large side pockets
Two end pockets-one with mesh ventilation for stinky gear
Detachable backpack with waist strap for riding
Beefy zippers
Removable shoulder strap with expedition-weight webbing
\$79.95

G

F DAY PACK

Coated 600 denier polyester
Padded back and shoulder straps
Webbed waist strap
3/4 length zipper
One central compartment and
two side pockets \$29.95

G LAUNDRY BAG

Coated 600 denier polyester
19" high X 16" wide X 12" deep
(48cms X 40cms X 30cms)
Ventilating mesh top
Drawcord closure
Webbed adjustable shoulder strap
3650 cubic inches

\$19.95

H OUTLAND BOARD PACK

Anyone that has feebly strapped a board to their pack with bungee cords knows this is a bunk solution. The Outland Board Pack is designed specifically for carrying a board along with the rest of your shit and has been tested in the harshest back country conditions. As the most technical pack Burton has produced, it has all the features of a traditional expedition pack combined with the most sophisticated snowboard carrying system ever developed. Coated 600 denier polyester
Anatomically shaped aluminum stay
Compression straps
Padded waist belt and fitted shoulder straps
Rugged nylon in all snowboard contact areas
Outside zippered stash pocket
Full side opening to main compartment
Board attaches with 3 securing straps
Bar tacked heavy duty loop for ice axe
2,500 cubic inches

\$129.95

I TUCKERMAN'S DAY PACK

The best finding is usually found somewhere off the beaten path—if you're willing to make that extra effort to hike, the rewards are large (or maybe we should say steep and deep). The Tuckerman's Day Pack is the complete back country (one day) system. The oversize waist pack quickly converts to a backpack-style board transport tool—providing you with an efficient and comfortable hiking system. Dual back-pack style shoulder straps are fully adjustable, and the oversized industrial strength waist pack has enough room for water bottle, Powerbars®, camera, tools, or whatever else you may need. If you'd like more information about this product—call Jake, he'll be happy to explain.

\$39.95

H
